Branch: REC

Department: I CSE FE

Batch: 2028

Degree: B.E - CSE

## NeoColab\_REC\_CS23231\_DATA STRUCTURES

REC\_DS using C\_Week 5\_COD\_Question 4

Attempt : 1
Total Mark : 10
Marks Obtained : 10

Section 1: Coding

### 1. Problem Statement

John, a computer science student, is learning about binary search trees (BST) and their properties. He decides to write a program to create a BST, display it in post-order traversal, and find the minimum value present in the tree.

Help him by implementing the program.

## **Input Format**

The first line of input consists of an integer N, representing the number of elements to insert into the BST.

The second line consists of N space-separated integers data, which is the data to be inserted into the BST.

### **Output Format**

The first line of output prints the space-separated elements of the BST in postorder traversal.

The second line prints the minimum value found in the BST.

Refer to the sample output for formatting specifications.

```
Sample Test Case
 Input: 3
 5 10 15
 Output: 15 10 5
 The minimum value in the BST is: 5
 Answer
 #include <stdio.h>
 #include <stdlib.h>
 struct Node {
   int data:
   struct Node* left;
   struct Node* right;
struct Node* createNode(int data) {
   struct Node* newNode = (struct Node*)malloc(sizeof(struct Node));
   newNode->data = data;
   newNode->left = newNode->right = NULL;
   return newNode;
 }
 typedef struct Node Node;
 struct Node* insert(struct Node* root, int data) {
   Node*newn=(Node*)malloc(sizeof(Node));
   if(root==NULL){
     newn->data=data;
     newn->left=NULL:
     newn->right=NULL;
     root=newn;
```

```
else if(data<root->data){
root->left=insert/**
         root->left=insert(root->left,data);
       else if(data>root->data){
         root->right=insert(root->right,data);
       return root;
    void displayTreePostOrder(struct Node* root) {
       if(root!=NULL){
         displayTreePostOrder(root->left);
         displayTreePostOrder(root->right);
         printf("%d",root->data);
    int findMinValue(struct Node* root) {
       if(root==NULL){
         return 0;
       else if(root->left==NULL){
         return root->data;
       }
       else{
        return findMinValue(root->left);
    int main() {
       struct Node* root = NULL;
       int n, data;
       scanf("%d", &n);
       for (int i = 0; i < n; i++) {
         scanf("%d", &data);
         root = insert(root, data);
       }
       displayTreePostOrder(root);
printf("\n");
```

int minValue = fi printf("The minii return 0; }	ndMinValue(root); num value in the BST	is: %d", minValue);	240701470
